Jorge Cristo

Full-Stack Developer · Bug fixing & app rescue · Web3 / Solidity

SUMMARY

Full-stack developer with 3 years of freelance work and around 20 projects delivered, many of them production apps for clients in Web3, climate and community projects. I take over existing codebases and get them working: debugging, broken builds and deploys, database and auth issues, and new features on top. On the Web3 side I build dApps and Farcaster mini apps and review Solidity contracts. A background in production engineering shapes how I work: diagnose first, agree on a fixed scope, deliver on a separate branch with a clear write-up.

WHAT I DO

Bug fixing & app rescue
React, Next.js and Node apps, including ones built with Lovable, Bolt or Cursor: build and deploy errors, auth, Supabase and database rules, broken integrations.

Web3 & smart contracts
dApps on EVM chains (Celo, Ethereum), Solidity contract review, wallet flows, Farcaster mini apps, account abstraction.

Features & automation
New pages and features end to end, Stripe payments, AI/LLM integrations, n8n and Zapier workflows, Python data apps.

EXPERIENCE

Freelance Full-Stack Developer · remote
2023 – present

Client work across Web3, environmental and community organizations, including projects under NDA.

DeCleanup Network
dapp.decleanup.net · miniapp.decleanup.net

- Full-stack developer on a Web3 platform that coordinates and rewards real-world cleanups, plus its Farcaster mini app; used by 100+ people across community cleanup groups.
- Fixed production bugs and shipped new features across front end, back end and database.
- Reviewed Solidity smart contracts and built front-end pages and flows connected to them.

TypeScript · React · Node.js · Solidity · Celo · Farcaster

Bass Forest
bassforest.earth

- Designed and built from scratch, solo, the website for an annual global electronic music festival tied to World Environment Day and tree planting.

TypeScript · React

Monthly Earth Day
monthlyearthday.org

- Designed and built from scratch, solo, the community hub for monthly environmental actions.

TypeScript · React · Node.js

Founder & Lead Developer · BeRegen
2023 – present

beregen.xyz · Regenerative infrastructure for communities, connecting real-world action, learning, identity, governance and funding, with fieldwork in the Mantiqueira range, Brazil.

- Designed and built the ecosystem site and its product line: RegenImpactHub (identity and impact validation, in beta), RegenFlix (learning platform with Stripe payments), BeRegen App (daily practices, MVP).
- Designed GOPR, a reputation-based optimistic governance model.

TypeScript · React · Node.js · Stripe API · Web3

Content, Community & Docs · NFTrees Brasil, Greenpill Brasil, ReFi DAO, Beregenerative.life
2021 – 2025

- Built and maintained blogs and marketing sites for Web3 projects, with SEO.
- Wrote technical documentation for blockchain platforms and ran their community channels.

SELECTED PROJECTS

PassPay
github.com/j-c-fstk-dev/PassPay
Gasless stablecoin payments using passkeys and account abstraction. Reference implementation.
TypeScript · React · Node.js · Web3

SubGuard AI
github.com/j-c-fstk-dev/subguard-ai
Analyzes recurring subscriptions with AI and suggests what to cut.
Python · TypeScript · Streamlit

FineCoding
finecoding.netlify.app
Blog template with AI integrations; also my dev blog.
TypeScript · React

Contextual SEO Engine
contextual-seo-engine.netlify.app
AI-powered marketing content generator, built for a Base44 competition.
JavaScript · React · Node.js · LLM APIs

LEAP Agent
github.com/j-c-fstk-dev/LEAP-Agent
Framework for AI automation agents. Prototype.
Python · LangChain

ClipVault
github.com/j-c-fstk-dev/clipvault
Clipboard manager with automatic categorization.
TypeScript

SKILLS

Languages	TypeScript, JavaScript, Python, Solidity, SQL, Java, Kotlin
Front end	React, Next.js, Angular, Vue, Tailwind CSS, HTML, CSS
Back end	Node.js, Express, REST APIs, Supabase (auth, RLS), Firebase, Stripe API
Databases	SQL: PostgreSQL, MySQL, SQLite · NoSQL: MongoDB, Firestore · local and browser storage
Web3	Solidity, EVM (Ethereum, Celo), Solana, Ethers.js, Web3.js, account abstraction, Farcaster mini apps
Automation & AI	n8n, Zapier, Kommo CRM, Streamlit, LangChain, LLM APIs
Tooling	Git and GitHub, Linux (daily driver), Netlify, Vercel, Docker, GCP; AI-assisted development with Claude, Cursor and Copilot

EARLIER CAREER

- **Owner, Brincando em Família Ateliê** 2019 – 2025
  Ran the e-commerce store, website and digital marketing.
- **Train Operator, Estrada de Ferro Campos do Jordão**
  2015 – 2023
  Operated and troubleshot electromechanical systems under strict safety protocols.
- **Engineering Assistant, Zodiac (pharmaceuticals)**
  2010 – 2014
  Built cost-control and maintenance-order systems; process documentation.

EDUCATION

B.Sc. Production Engineering
FUNVIC, Brazil · 2015

Blockchain Developer with Solidity
DIO × Binance bootcamp · 2025

CS50 (Harvard) · freeCodeCamp · DIO learning paths

LANGUAGES

Portuguese (native) · English (advanced)
